

TITLE/name of the algorithm

Explanation of the algorithm: its goal and how it works, on what it relies, what's the logic behind it.

Pseudo-code

```
Algorithm(...)  
instruction 1  
instruction 2  
return result
```

Time Complexity: $O(pokemon)$

Space Complexity: $O(pokemon)$

Recurrence Formula:

$$T(n) = 2T\left(\frac{pokemon}{2}\right) + pokemon$$
